Groww

Improving Auto-Debit Management

Product Club, IITK

By Team -

5 shades of Groww

Problem Statement

Pappu, a typical user of financial services, encounters significant difficulties managing his auto-debit subscriptions. After enrolling in a salsa class and setting up an auto-pay mandate, he struggles to cancel this subscription without disrupting other unrelated payments. His challenges are exacerbated by poor user interface design and fragmented payment management systems across different apps.

Problems

Problem 1

Complexity in Canceling Auto-Debit Subscriptions: Users face hurdles when attempting to cancel auto-debits, often having to navigate poorly designed banking apps or contact multiple providers

Problem 2

Difficulty Tracking Auto-Debits Across Platforms: Users struggle to keep track of various auto-debit payments linked to different apps (UPI, debit cards, credit cards)

Problem 3

Lack of Centralized Management: No single platform allows users to view, manage, and cancel all their auto-debit subscriptions efficiently

Market Analysis

1. Current Market Scenerio

Fragmented systems causing user frustration and financial risks.

Around 12% are frustated as they did not know how much they spend every month, 37% admitted to paying for the subscriptions they don’t use.

2. Target Audience

Financial services users who rely on multiple auto-debit subscriptions.

Around 92% of this demographic wants subscriptions to be managed at one place.

3. Competitive Landscape

Few competitors offering partial solutions without centralized management.

Around 70% of the users find these apps insufficient for comprehensive management.

User Persona

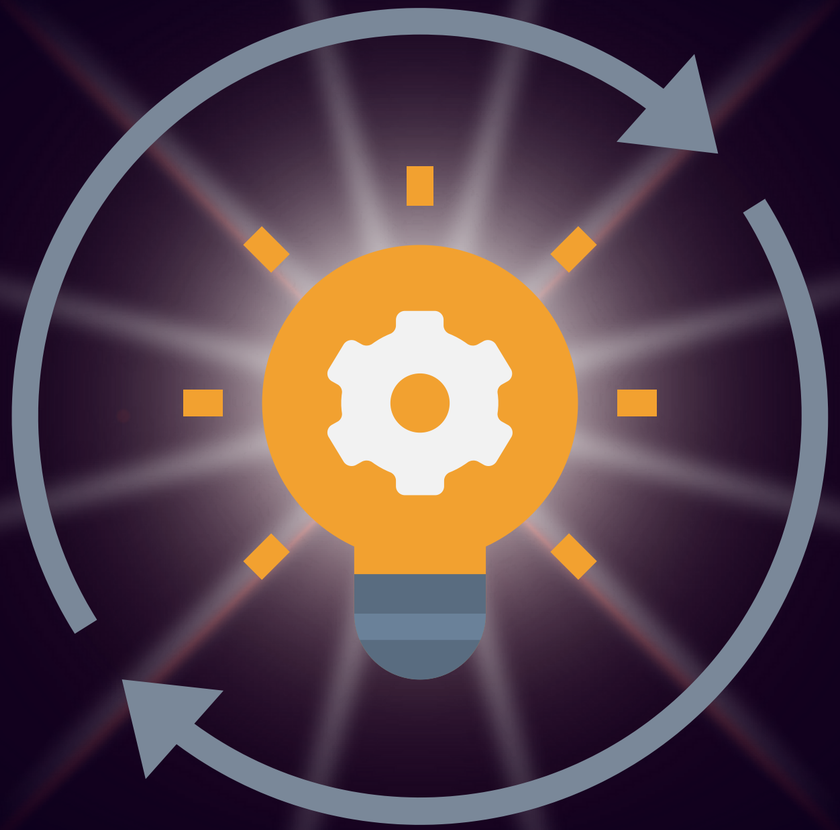

John	24	Bangalore	SDE
Name	Age	Location	Occupation

John a 24-year-old software engineer in Bangalore, earning 14 lakhs per year. Has multiple subscriptions including OTTs, EMIs, and household services.

Needs:

- **A centralized platform to manage all recurring payments.**
- **Alerts for upcoming due dates and payments.**
- **Simplified process to update payment methods.**
- **Comprehensive overview of spending on subscriptions and other recurring expenses.**

Ideation

Solution 1

- Simplified and intuitive interface to cancel any auto-debit subscription with minimal steps.

Solution 2

- Integration with major banks, UPI apps, credit card providers, subscription services and payment gateways.

Solution 3

- Tools to temporarily pause subscriptions without cancelling them.

Solution 4

- Developing automated remainders and alerts for all the auto-debit subscriptions.

Product Features

1. Centralized Dashboard

- All active auto-debit subscriptions displayed in one interface.

2. One-Click Cancellation

- Feature allowing users to cancel subscriptions with one click.

3. Notifications and Alerts

- Automated reminders for upcoming payments and low balance alerts.

4. Multi-Platform Sync

- Supports integration with UPI, debit cards, and credit cards.

5. Intuitive UI

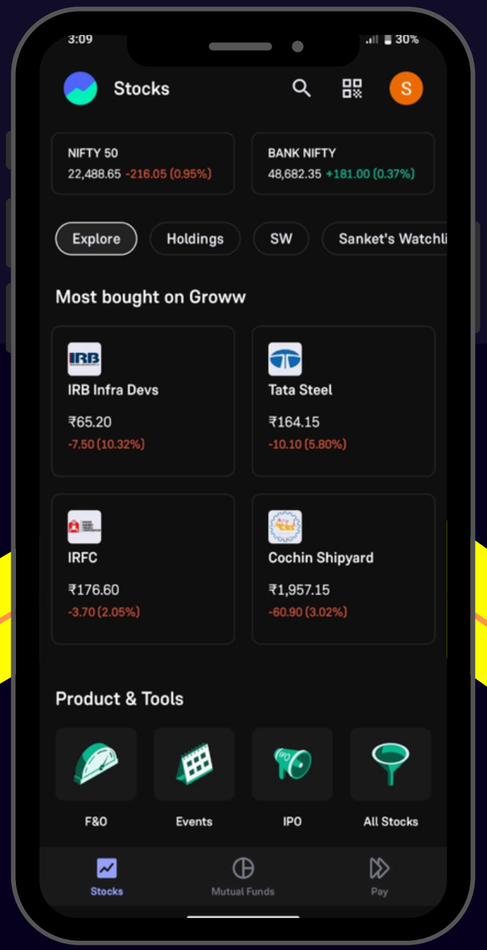

- A user-friendly interface with clear navigation and accessible features.

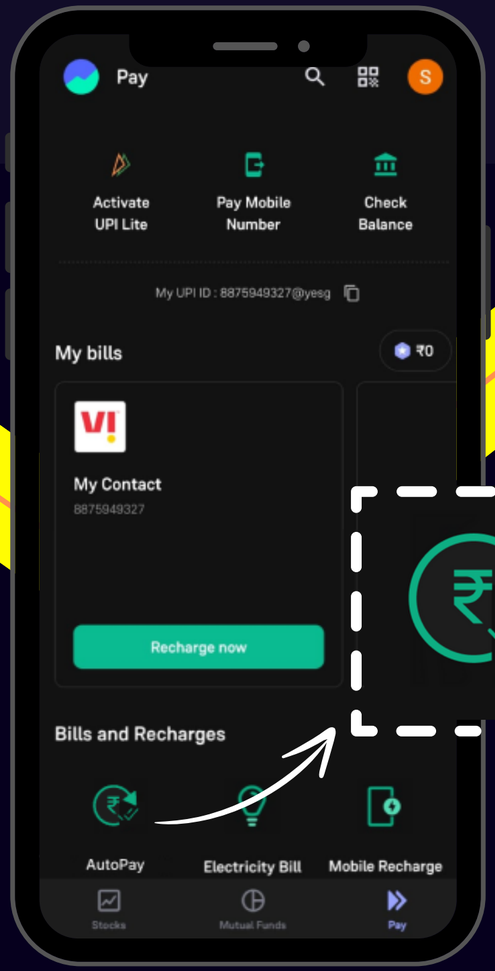

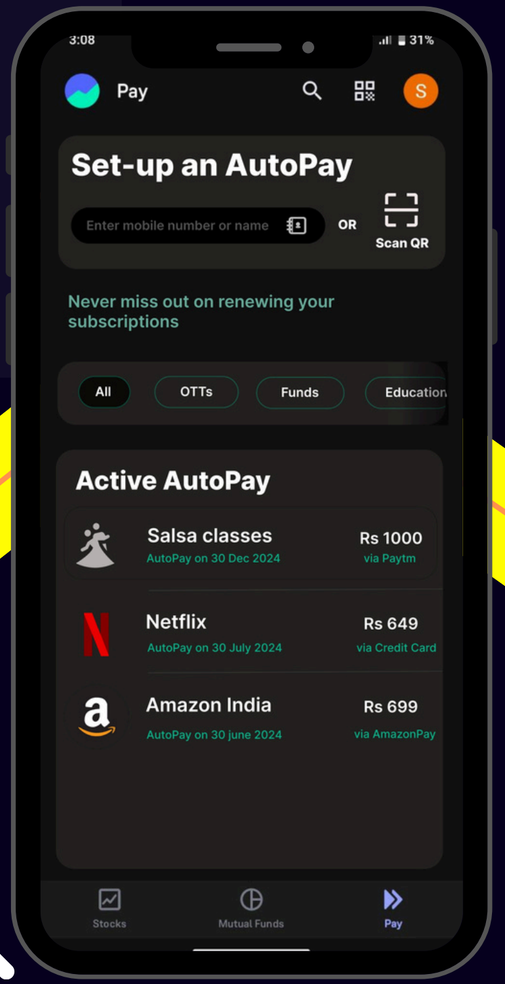

6. Security Features

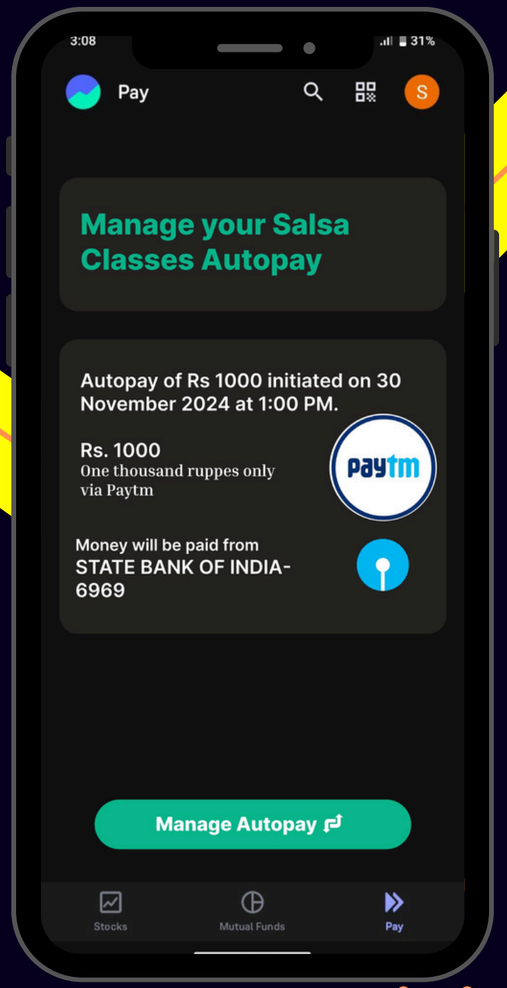

- Robust security measures to protect user data and ensure secure transactions.

User Journey

Steps to Incorporate this feature

FOR UPI AUTOPAY

Before accessing any autopay information, Groww must have explicit consent from the user, which can be obtained through a digital consent form.

After ensuring compliance with NPCI's security and data handling protocols, Groww will integrate with NPCI's API for accessing autopay details.

As Groww has the user's consent, it can now request NPCI for autopay details. After verification, NPCI will provide autopay mandate details to Groww.

Now a user can see his/her Autopay mandate details on the interface of Groww App

Steps to Incorporate this feature

FOR CREDIT/DEBIT CARD AUTOPAY

Before accessing any autopay information, Groww must have explicit consent from the user, which can be obtained through a digital consent form.

After ensuring compliance with BANK’s security and data handling protocols, Groww will integrate with Bank’s API for accessing autopay details.

As groww has user’s consent so now groww can request Bank for autopay details, after verification Bank will give autopay mandate details to groww.

Now a user can see his/her Autopay mandate details on the interface of Groww App

Technology Stack

BACKEND:

- Node.js for scalable server-side operations.
- MongoDB for efficient data storage and retrieval.

FRONTEND:

- React Native for a seamless mobile app experience.
- Redux for state management.

INTEGRATION:

- APIs for integrating with UPI, debit, and credit card systems.
- Secure payment gateway for handling transactions.

Conclusion and Next Steps

Conclusion

- The proposed solution addresses key user pain points by offering a centralized, user-friendly platform for managing auto-debit subscriptions.

Next Steps

- Develop and test the prototype.
- Gather user feedback and refine the solution.
- Launch the centralized auto-debit management platform within the Groww app.
- Encourage stakeholders to support the development and implementation of this solution to enhance user satisfaction and market competitiveness.

Thank You
